

Sorting

121. Write a program to implement Quick Sort on the given array using:

- A. First element as pivot
- B. Last element as pivot

Array is [25, 10, 30, 15, 20, 5]

122. Given the array: [25, 10, 30, 15, 20, 5]

- A. Display the array after each partition

123. Write a C program to:

- A. Implement Quick Sort
- B. Take a sorted array as input

Count number of recursive calls

Explain why this becomes worst case ($O(n^2)$)

124. Create a structure for students: Student { id, name, marks }

Sort students using Quick Sort based on marks

125. Write a program to implement Quick Sort on the given array:
[25, 10, 30, 15, 20, 5]

- Select the pivot as a random index.
- Use **start + rand() % (end - start + 1)** to generate the random index
